

The diagram illustrates the layers of virtualization architecture. It consists of three main horizontal layers. The top layer contains four gray rectangular boxes with black borders. The first box on the left is wider than the other three, which are of equal width. The second, third, and fourth boxes are stacked side-by-side. The middle layer is a single, wide light green rectangle. The bottom layer is a single, wide light blue rectangle. All rectangles have a thick black border.
